Perioperative pain research portfolio index

Independent educational portfolio by Collin B. George. Updated 27 October 2026.

The projects below are literature analyses, study exercises and a software simulation. They do not establish clinical competency, institutional endorsement or a validated patient-care tool.

Project	Current work	Access
Non-opioid anesthesia overview	Selected-source educational overview; unsupported historical review-method claims withdrawn	Private; publication review pending
TKA evidence map	Selected-source narrative map; estimated screening counts, unverified extraction tables and original pooling withdrawn	Public educational draft
Breast reconstruction analgesia review	Narrative analysis with reference-identity records, search	Public educational draft

Project	Current work	Access
	diagnostics and explicit population limits	
Breast perioperative learning modules	Discussion modules that replace the earlier operational protocol	Private; publication review pending
Critical care physiology	42 entirely synthetic reasoning exercises; no real-patient encounters	Private; publication review pending
Smart NOA	Unvalidated rule-checking simulation with no device or patient interface	Private; publication review pending

Private links require repository access. Their listing here does not make the source public.

Research interests

Perioperative analgesia, pain mechanisms, longer-term recovery and persistent postsurgical pain are areas for further study. Proposed studies are plans; no participant recruitment, institutional approval, completed dissertation or clinical activity is represented here.

Review and provenance

Earlier unsupported clinical, methodological and institutional claims are superseded by the current source. Publication review and provenance describe the completed checks and remaining limits. The corrected source does not certify legal compliance or authorize patient care.

Author-owned material is shared under the repository's license; third-party sources retain their own rights. The named HTML/PDF exports follow this index.
