Perioperative pain research portfolio index

Independent educational work. Not a clinical protocol, prescription, patient handout, or validated decision aid. This revision is a draft pending clinical and publication review.

This index links independent educational and research drafts. A planned research program is not a completed body of evidence, an approved dissertation, an institutional practice, or authorization to conduct human research.

Project: Non-opioid anesthesia overview
Current framing: Selected-evidence educational discussion; earlier review-method claims require records.

Project: TKA perioperative review
Current framing: Review draft; original pooling and non-inferiority claims require correction and audit.

Project: Breast reconstruction analgesia review
Current framing: Narrative literature review, not a scoping review or protocol.

Project: Breast perioperative learning modules
Current framing: Educational modules; historical repository name retained.

Project: Critical care physiology portfolio
Current framing: Synthetic physiology exercises, not patient care experience.

Project: Smart NOA
Current framing: Unvalidated software simulation, not an intelligent clinical controller.

Research interests

The relationship between perioperative analgesic strategy, pain mechanisms, longer-term recovery, and persistent postsurgical pain remains an area for study. Proposed observational studies, trials, biomarkers, or doctoral projects are plans only. Their feasibility, ethics, methods, sponsorship, and oversight have not been established here. No participant recruitment or clinical activity is authorized by this repository.

Reporting and appraisal frameworks apply only where actually used and documented. PRISMA-ScR is a reporting framework; GRADE is not an A/B/C label for study design, and ICH-GCP is not a certification conferred by listing it. No blanket compliance or submission-readiness claim is made.

The architecture HTML/PDF is rebuilt from this current index. See PUBLICATION_REVIEW.md.
